

ENDOMETRIOSIS WARNINGSIGNS

Key points

- Possible clues include severe menstrual cramps, pelvic pain between periods, pain during sex, painful bowel movements or urination during periods, and heavy bleeding.
- Symptoms vary, and some people are dismissed for years before getting answers.
- Seeking care early can support pain relief and informed choices.

When to seek care

- Debilitating pain
- Pain that is worsening over time
- Pain plus trouble getting pregnant
- Bleeding between periods with severe pain

Suggested Actions

- Track where pain happens, not just how strong it is
- Mention bowel or bladder pain during periods
- Ask whether endometriosis is being considered

Key Takeaway

Severe or unusual pain should always be taken seriously.
