

WHAT THE MOON & YOUR CYCLE MAY TELL YOU

The menstrual cycle and the moon follow similar timelines, which has led to curiosity about a possible connection. However, this relationship is not scientifically reliable.

Why People Link the Moon & Menstrual Cycles

- Menstrual cycle: ~21–35 days
- Lunar cycle: ~29.5 days

Some traditions associate:

- New moon → menstruation
- Full moon → ovulation

What Research Shows

- Some occasional alignment may occur
- Not consistent across individuals
- Often influenced by modern lifestyle factors like artificial light
- No reliable predictive relationship

What This Means for You

The moon may be interesting for reflection, but:

- It should NOT be used to track fertility
- It is not medically reliable
- Menstrual cycles are influenced by hormones, stress, and health

Key Takeaway

The moon may align with menstrual cycles sometimes, but your cycle is best understood by tracking your own body patterns over time.
