

CONTRACEPTIVE USE IN JAMAICA

Growing Awareness and Dual Protection

Contraceptive use in Jamaica has increased over time as more people gain access to family planning services and education.

This shift reflects greater awareness, improved access, and empowerment in reproductive decision-making.

Why Contraceptive Awareness Matters

Contraceptives help:

- Prevent unplanned pregnancies
- Support family planning
- Reduce economic and health challenges

What Is Dual Protection

Dual protection means using:

A condom + another contraceptive method

Examples:

- Birth control pills
- Injectables
- Implants
- IUDs

Condoms are the only method that also protects against STIs, including HIV.

Common Contraceptive Options

- Condoms → protect against pregnancy + STIs
- Pills → regulate hormones
- Injectables → last about 3 months
- Implants → long-term protection

Key Takeaway

Contraception in Jamaica is not just about preventing pregnancy—it also supports safer sex and healthier futures. Dual protection remains a key public health message.
