

# IRREGULAR PERIODS

## Key points

- Irregular cycles can happen with puberty, stress, intense exercise, hormonal conditions, pregnancy, breastfeeding, thyroid issues, PCOS, and other causes.
- A pattern matters more than one unusual month.
- When irregular periods continue, they deserve evaluation instead of guesswork.

## When to seek care

- Regular cycles suddenly becoming very irregular
- No period for months
- Irregular bleeding with severe pain or pregnancy possibility

## Suggested Actions

- Track cycle length across several months
- Note major stress, weight, or exercise changes
- Take a pregnancy test when relevant

## Key Takeaway

Patterns matter more than one irregular cycle.
